ABDULLAH ALSULAMI

Number phone:0555015709 | alsulamii.abdullah@gmail.com | Linkedin | Portfolio

Professional Summary

Data Science graduate with a strong foundation in machine learning, data analytics, statistical analysis, and artificial intelligence. Experienced in developing predictive models, natural language processing applications, and data visualization solutions using Python, SQL, Scikit-learn, TensorFlow, and Power BI through academic and hands-on projects. Passionate about solving real-world problems with data-driven solutions and eager to contribute to innovative, data-focused teams while continuously expanding technical expertise.

Education

- Master of Science in Data Science | University of Jeddah | GPA: 4.88 / 5.00 | 2026
- Bachelor of Science in Mathematics | Umm Al Qura University | 2021

COURSES & CERTIFICATIONS

- **Programming for Data Science with Python Nanodegree — Udacity**
- **Data Science Bootcamp — Saudi Digital Academy (SDA)**
- **Microsoft Certified: Power BI Data Analyst Associate (PL-300)**

Projects

- **MISBAR: Predictive Data Quality and Anomaly Monitoring Using Machine Learning and Deep Learning**
  Developed a predictive data quality and anomaly monitoring framework using Random Forest, XGBoost, and an Autoencoder. Combined supervised and unsupervised anomaly detection through score-level fusion, with SHAP-based explainability to identify the features contributing to anomalous records.
- **Android Malware Detection Using Stacking Ensemble**
  Designed and developed a stacking ensemble model for Android malware detection using permission-based features and multiple machine learning algorithms. Applied data preprocessing, feature analysis, model training, cross-validation, and performance evaluation to build a robust detection system and compare the effectiveness of individual models with the ensemble approach.
- **Aerial Image Urban Area Clustering Using Texture-Based Features**
  Developed an unsupervised aerial image clustering system for urban land cover analysis using texture-based feature extraction. Applied Local Binary Patterns (LBP) to capture spatial texture information and Gaussian Mixture Models (GMM) to identify and group different urban area patterns, with image preprocessing and clustering analysis used to improve the interpretability of aerial imagery.

Skills

Personal Skills
Analytical Thinking | Critical Thinking | Problem Solving | Communication | Teamwork | Time Management | Leadership | Creativity | Adaptability | Attention to Detail

Technical Skills
Python | SQL | SAS Viya | Power BI | Microsoft Excel | Pandas | NumPy | Scikit-learn | TensorFlow | Git | Machine Learning | Deep Learning | NLP | Data Visualization

Languages: Arabic (Native) | English (Professional)
